

Customer Testimonial

1. Recently my mother has completed Radiology treatment course arranged by Medihub in **Indira Super Speciality Hospital**, Vellore. One good point to emphasize was the performance and interpersonal skills of the professionals.

2. We were very happy by choosing Medihub. Very helpful people. My parents, who are not native had to fly to Vellore for a treatment. Organisation of the trip was fantastic, we got all the details. They helped us with the hotel information, organised the transport from the airport and to the clinic each day. With parents was always a person who was translating and helping. Amazing communication with the doctor and service manager. People who you can really trust. Highly recommend.

3. They are a very helpful company they help me to allot to on my case from receiving tests and documents and get connected with the best hospital and doctors who specialise on my case until they give me the final report for my case including all details about it from the way of treatment to the final cost

4. This was my husband's fourth treatment for advanced prostate cancer. Once again everything went smoothly due to efforts of everyone on the Medihub team.

5. The Medihub team was great to deal with from the start of the process. The communication was on point, and the clinic we were matched with was outstanding. Our organizer was very pleasant and always available to answer any questions and address our concerns.

6. We were referred to **Nalam Medical Centre and Hospital** under **Dr. R. Ashok** and his amazing team for our 9 year old son's elbow surgery and we could not be happier with the hospital, medical team and his most importantly, his surgery went very well without any issue and we were amazed at the level of service as well.

7. I have contacted booking health regarding the medical assistance due to the past optic neuritis in both eyes. I was quickly replied back by one of the company employees Kavitha . J . She thoroughly and with great knowledge explained the services provided by the company. Great customer service!

8. I am very grateful of Medihub team.

They were calling me everytime and checking upon all of the details They booked for me the covid tests and took care of everything and was showing the eagerness to help at all times.

Thanks a lot everyone 🙏

9. We contacted Booking Health for my daughter's treatment, and the company has already helped us with the medical program and book appointments with the clinic. Thanks , for helping us with all the steps of the medical journey. All the best to the company

10. As per my first trip for treatment, my experience was once again very positive. Every detail was covered and the service of the provider was extremely helpful. I look forward to returning for a third treatment

Laboratory services

drug testing:

A drug test looks for signs of one or more illegal or prescription drugs in a sample of your urine (pee), blood, saliva (spit), hair, or sweat. The purpose of a drug test is to look for drug use and misuse. A drug test can check for a single drug or for a group of drugs in your body. Most drug tests use urine samples. These tests can find signs of drugs within hours to several days or more before the test.

Hematology: **Highly trained healthcare providers who specialize in diseases of the blood and blood components.** These include blood and bone marrow cells. Hematological tests can help diagnose anemia, infection, hemophilia, blood-clotting disorders, and leukemia. Immunology:

molecular diagnostics: Molecular tests to detect viruses use the polymerase chain reaction (PCR) and other comparable nucleic acid amplification methods. FDA-cleared multiplex tests have become available for the diagnosis of respiratory, gastrointestinal, and central nervous system (CNS) infections

Oncology: HaH programs typically involve multidisciplinary care teams that follow patients after emergency department or outpatient evaluation and include a robust bundle of services (including home visits by nurses and physicians, home infusion, remote monitoring, and laboratory testing).

preventive care : Preventive care **helps detect or prevent serious diseases and medical problems before they can become major**. Annual check-ups, immunizations, and flu shots, as well as certain tests and screenings, are a few examples of preventive care. This may also be called routine care.

Urology: Urology combines the management of medical (i.e., non-surgical) conditions, such as urinary tract infections and benign prostatic hyperplasia, with the management of surgical conditions such as bladder or prostate cancer, kidney stones, congenital abnormalities, traumatic injury, and stress incontinence.

Dermatology: Dermatology is **the science that is concerned with the diagnosis and treatment of diseases of the skin, hair and nails.**

Autoimmune: Immunosuppressive therapies can treat many types of autoimmune diseases. These medications target different parts of your immune system by suppressing it. Immunosuppressants can help manage your condition and protect organ function, such as by controlling inflammation.

blood testing: **A needle attached to a syringe or special container is inserted into the vein. The syringe is used to draw out a sample of your blood.** You may feel a slight pricking or scratching sensation as the needle goes in, but it shouldn't be painful

Pyshiotherapy: Physiotherapy **helps restore movement and function when someone is affected by injury, illness or disability.** Physiotherapists are experts in developing and maintaining peoples' ability to move and function throughout their lives.
